

# Challenge 2

## Lego Architecture: Repetition

Repetition in design was popular with the Georgians and architects designed streets and buildings with repeating windows, columns and decorations.

If you look around Bath you will see lots of different examples of this such as this pattern of houses on the Paragon. Can you find any examples of repetition in design near your house?

### The challenge

Can you copy our design and keep repeating the same building?

### Rules

1. Try to use the exact same size bricks as we have so that the buildings are truly identical.
2. Use as many baseplates as you need to make the street as long as you can.

### Want another challenge?

Why not try designing your own small building and repeating it to create a street of identical buildings? You could also encourage other members of your family to continue repeating your pattern to make your street even longer!

**How did you get on? Share your results with us on social media!**
